

Thank You for Choosing Librela

You're on your way to giving your dog with osteoarthritis (OA) pain more days of play!
As you continue your dog's treatment journey, here's what you can expect with Librela:

It's a monoclonal antibody that targets NGF, a key factor in OA pain¹

Long-term control of your dog's OA pain with a monthly injection^{2,3}

Controls signs of OA pain in dogs, which can help them be more active and improve their overall quality of life^{2-5*}

It's a once-monthly injection, so you don't have to worry about giving your dog daily oral medication for their OA pain

*Results from clinical studies.

Don't forget to schedule your monthly appointments to keep your dog on track with their treatment.

IMPORTANT SAFETY INFORMATION: For use in dogs only. Women who are pregnant, trying to conceive or breastfeeding should take extreme care to avoid self-injection. Hypersensitivity reactions, including anaphylaxis, could potentially occur with self-injection. LIBRELA should not be used in breeding, pregnant or lactating dogs. LIBRELA should not be administered to dogs with known hypersensitivity to bedinvetmab. The most common adverse events reported in a clinical study were urinary tract infections, bacterial skin infections and dermatitis. See full Prescribing Information at LibrelaPI.com.
